Route Optimization Demo

NextBillion.ai Route Optimization API: Engineered for Real-World Complexities

Maximize Efficiency

Plan the most efficient routes for your entire fleet, reducing drive time, fuel consumption, and operational costs.

Real-World Adaptability

Instantly re-optimize routes in response to traffic, weather, cancellations, or new priorities.

Transparent pricing

Lower your total cost of ownership with flexible, usage-based pricing—no hidden fees.

Enterprise-grade customizations

Solve complex routing scenarios with support for 50+ constraints, to solve highly complex, real-world routing scenarios.

Scalable Performance

Tailor the API to your unique operational constraints.

Effortless Integration

Simple RESTful API, robust documentation, and dedicated support.

Why Choose NextBillion.ai's Route Optimization API?

01 Efficiently plan routes for entire fleets, factoring in pickups, deliveries, and multi-dimensional vehicle capacities.

02 Deliver faster, more reliably, complete more deliveries per hour, and expand service coverage without expanding your fleet.

03 Handle up to 4,000 locations & 4,000 tasks per optimization job—ideal for enterprises managing large fleets and high delivery volumes.

04 Adapt instantly to traffic, weather, road closures, or last-minute order changes with live and historical data integration.

How it works

POST your vehicles, jobs, shipments and constraints to API

Instantly recieve the most efficient set of routes, tailored to business needs and real world cconditions

Plug and Play into your delivery, dispatch or your tracking system for real-time, automated routing

Abhishek Rai
Vice President of Engineering, Xplor Technologies

Service Autopilot by Xplor integrates with NextBillion.ai to provide advanced Route Optimization powered by AI. It enables us to optimize service routes, enhance service delivery speed and reliability, and reduce costs
